## Trash Chutes

Getting debris from the roof or an upstairs window into a dumpster on the ground is often a case of throw and hope. You can improve your odds of getting the garbage where you want it with a Superchute®. These tough, 5mm-thick plastic chutes come in cone-shaped sections that lock together with carabiners. Three sections make 10 feet of rise. Chute diameters range from 18 to 36 inches. Hoppers are available for the top of the chute, and you can also put a door section in place of any regular section to provide another entry point.

Prices vary with chute diameter and options. You can get your company name hotstamped on each section. For more information, contact Superchute Ltd., Montreal, Quebec, Canada, 1-800-363-2488.
